

## Using your Voice/Vocal Production Review

1. What is the difference between the breathing process used in regular breathing and the breathing process used by a speaker.
2. Define resonance and explain how bone resonance differs from cavity resonance.
3. Identify the three major cavity resonators and explain how each one affects the sound of the voice.
4. What are the major articulators of sound that are located in the mouth?
5. What is the IPA? Why is it more effective in symbolizing sounds than the English alphabet?
6. What is the difference between pitch and volume?
7. What common problems do people have in controlling volume or loudness?
8. What is the difference between nasality and nasal resonance?
9. What are the four major articulation problems that can be remedied with practice?
